

RCare Inovonics Integration

Interoperability is King

RCare, the leader in wireless nurse call technologies, has taken another big leap forward in interoperability. RCare now integrates with Inovonics hardware.

Choose the best fit for your community

- An upgrade to RCare's state-of-the-art nurse call system using your existing Inovonics hardware
- A new Inovonics installation
- A hybrid system

The RCare BCube

RCare's Inovonics integrations allows you to upgrade in phases. No stifling upfront costs.

You don't need to trash your current system and start totally new. RCare can ease you into the most modern, reliable and upgraded capabilities of our nurse call and remote monitoring system, using your existing hardware investments. Not only will this save you money up front, but you'll save with RCare for the lifetime of the system.

Savings

Savings Up Front

- RCare allows you to save money by using your existing Inovonics hardware – no need to replace your transmitters.

Savings Over Time

- **No hidden update fees.** RCare's software updates are always included as part of your site license, for the entire life of your system.
- **No licensing fees for transmitters.** RCare now sells Inovonics products, but we never charge licensing fees for resident transmitters, no matter where you get them.
- **No massive service contracts.** With RCare's sensible support policies, you save money and reduce the total cost to own and operate your nurse call system.

With RCare you don't need to worry about multiple logins, duplicate data entry, or monitoring multiple systems. RCare was designed with interoperability in mind. RCare integrates with PointClickCare, Amazon Alexa, Accutech Resident Guard, GrandCare Systems, UpBed, and Inovonics. And, it's easy to control just about anything using RCare's universal transmitters.

More Than a
Nurse Call System
